CLOUDDEVELOPERS

Mobile, Big Data & Service Models:
Critical Take-Aways for Cloud Developers

SUMMIT & EXPO 2014

WWNSAD?

- The NSA and NIST have been public about:
 - Inevitability of mobile computing
 - Need to support cloud-based services, even for use with secret data in the field
- What works for them can work for you

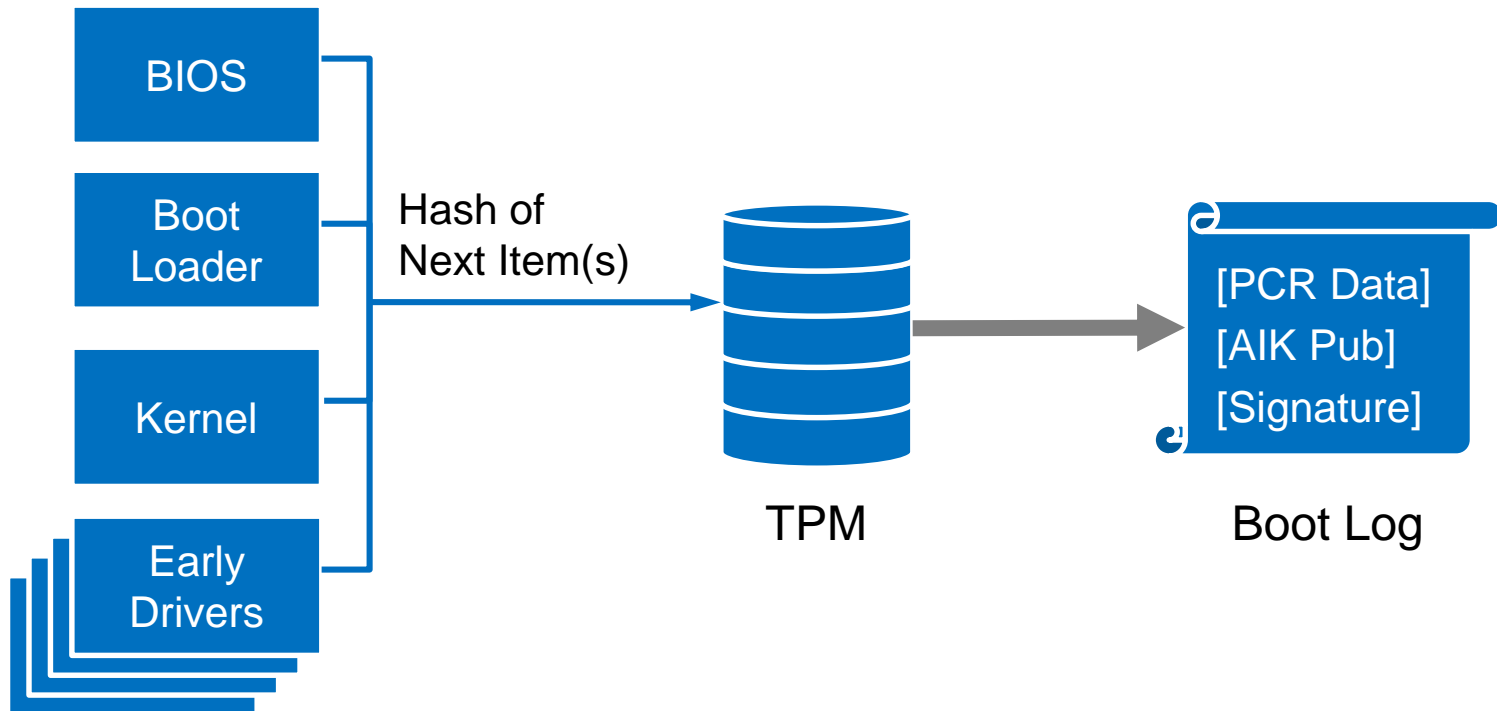

Introduction

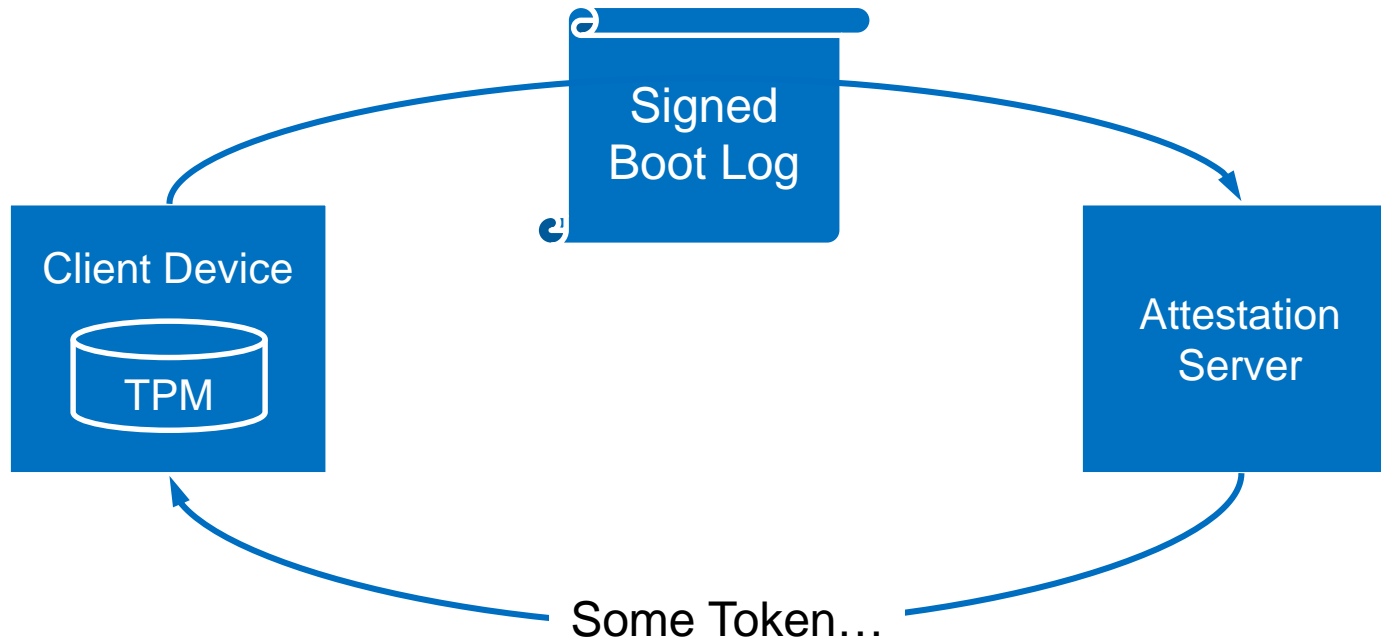

- What is a “TPM” (Trusted Platform Module)?
- What is “Measured Boot”?
- What is “remote attestation”?

Measured Boot and Remote Attestation

Measured Boot

Remote Attestation

Weaknesses

- Provisioning
 - Secure supply chain?
 - Manufacturer endorsement key database
 - Patching delay and whitelist maintenance
- Integrity of TPM hardware
 - Capping; electron microscopes
 - Trend of migration from hardware to firmware
- Hibernate file is unprotected (encrypt!)

Protecting Data with StrongNet™

- Data is encrypted
- Encryption key is bound to a specific, authenticated TPM
- Decryption is only possible when the device is policy-compliant
- Otherwise data cannot be viewed

Recent Developments

- Measurement-Bound Keys
 - “Trusted Tamperproof Time on Mobile Devices”
 - See jwsecure.com/dan
- Commercial availability
 - JW Secure StrongNet
 - Announced at RSA 2014
